SURVEYS COLLECTED

A 23-question community assessment survey was developed by Community Solutions to understand San Benito County residents' views on sexual assault, domestic violence and human trafficking.

The survey has four main components:
 (1) respondent demographics,
 (2) perceived prevalence of sexual violence (domestic violence, sexual assault and human trafficking),
 (3) attitudes towards reporting, and (4) the community's readiness to engage in prevention tactics.

To ensure we collected responses from a representative base in San Benito County it was important to offer the survey in both English and Spanish. The english survey was directly translated to Spanish with no modifications. The survey was available on Survey Monkey or by paper copy for individuals.

STRENGTHS OF THE COMMUNITY

Concerned Citizens

64%

of respondents felt it was important that all community members play a role in preventing sexual violence.

56%

of respondents volunteer in some way in their community

Small Town Feel
